KEY WORDS: Quasi-Stationary Distributions, Markov Chains, Diffusion Processes

MATHEMATICAL SUBJECT CLASSIFICATION: Primary 60J60; secondary 60F99

Abstract: In this talk, we first review some necessary background on the quasi-stationary distributions (QSDs), then we present some recent results on construction of QSDs for general Markov chains; finally, domain of attraction problem for both birth-and-death processes and one-dimensional diffusion processes is discussed, some related conjectures are presented.
