

Some Properties of Neutral Stochastic Functional Differential Equations

Chenggui YUAN *Department of Mathematics, Swansea University, UK*

KEY WORDS: existence and uniqueness, EM numerical solutions, convergence rate, large deviation

MATHEMATICAL SUBJECT CLASSIFICATION: 60H10, 60F10

Abstract: In this talk, I will present some properties of neutral stochastic functional differential equations (NSFDEs), which include the existence and uniqueness, the EM-numerical solution, convergence rate of numerical solutions, and large deviation of NSFDEs.
