

STATIONARITY AND QUASI-STATIONARITY FOR BIRTH-DEATH PROCESSES

Yong-Hua MAO *Beijing Normal University, PRC*, E-mail: maoyh@bnu.edu.cn

Abstract: After reviewing quasi-stationary distributions for birth-death processes with infinity natural and entrance boundaries, we prove that there exists a unique quasi-stationary distribution for the minimal birthCdeath process with infinity exit/regular boundary. We find that the quasi-stationary is closely related to the stationarity of the dual processes.
